

## ISSUE 9: FALL 2012

### Welcome to The Weekly Geek

This is a new e-newsletter from the Information & Instructional Technology Departments at Dakota County Technical College. Each week will have a different technology related topic.

### Save As PDF in Microsoft Office 2010

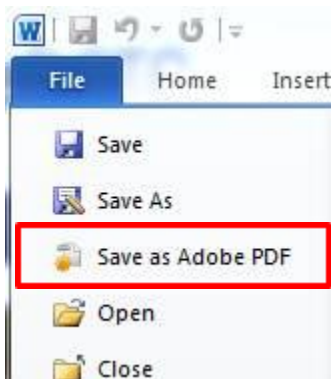

If you create a document and want to share with students or others – you can save it as an Adobe PDF file. They won't be able to make changes to the file and the users will also not need to have Microsoft Office to open the file.

A **Portable Document Format (pdf)** file is a self-contained cross-platform document. In plain language, it is a file that will look the same on the screen and in print, regardless of what kind of computer or printer someone is using and regardless of what software package was originally used to create it.

In Office 2010 you have the option to save directly to PDF without the full version of Adobe Acrobat creator software.

When saving your Word document, PowerPoint or Excel file – go to the file menu and choose Save as PDF

Note: You will want to save it as both the original document so you can edit it later, but use the Save as PDF option if you want to share it with others without allowing them to edit.

To view the document, users will need to have the free Adobe Reader installed on their computer.

The Reader software can be downloaded at: <http://get.adobe.com/reader/>
